

Past Resesarch Engagements

Potential Research Direction

With the increasing complexity of the problems ahead, it would require breakthroughs at each of the levels of computer stack while keeping in mind their interoperability with other layers. Hence, I find it challenging as an aspiring computer architect to explore the cross-stack optimizations for future applications. Therefore, I would be interested in working with a diverse group of students (either in a single group or through collaborations) who have expertise at different levels of system hierarchy and can work together towards a common problem.
